# WelComb® has all you need and nothing you don't!

**NO FEAR. NO DRAMA. NO PESTICIDES. NO GAPS.**

To get rid of lice and nits, you need the right comb. Most of the combs on the market slip right past the .3mm-wide nits (eggs). With rigid teeth just the right distance apart and a beveled edge that gets right down to the scalp, the WelComb® always gets the job done!

# What Nurses Need to Know About the Wet Combing Method

Did you know? It's the **comb**, not the chemicals, that gets rid of lice and nits. Wet combing is all about removing the live lice and the viable nits from the head. Simply removing the live lice is enough to kill them and removing the viable nits prevents them from hatching.

Remember, there is **no** pesticide or natural solution that can harm or kill nits. That means the **only** way to ensure that nits won't hatch and continue to spread is to physically remove them. And while it is low cost and safe, the wet combing method takes time and patience.

**For the wet combing method, all you need is:**

**Water** because lice freeze when wet, making it easier to capture and remove them.

**Conditioner** to lubricate the hair and make it much easier to comb through.

**WelComb®** to physically comb out lice and nits. With a gap between the teeth that's .15mm, it's small enough to capture even the smallest nit.

Full wet combing instructions, including videos in English and Spanish, can be found at [welcomb.com/instructions](http://welcomb.com/instructions) and [welcombspanol.com/instrucciones](http://welcombspanol.com/instrucciones)

## Deterra® Drug Deactivation System

The Deterra® Drug Deactivation System is an independently tested, safe and environmentally sound solution to permanently deactivating, destroying and disposing of unneeded pills, patches, liquids, creams and films at-home and in clinical and public settings. The process is powered by proprietary MAT12® Molecular Adsorption Technology which deactivates medications using activated carbon. The carbon used is organic, chemical free and safe for disposal in normal trash. Once the pharmaceuticals are placed in the pouch, warm water is then added, which dissolves the inner pod releasing the activated carbon. The warm water will also help dissolve pills and draw the drugs out of patches.
